

Experiment 2 – Qualys User Creation with Roles Configuration

Aim

To create users in Qualys Vulnerability Management and configure appropriate roles and access privileges.

Procedure

- 1. Log in to Qualys Cloud Platform using a Manager account.
- 2. Open Vulnerability Management / VMDR and navigate to Users → Users.
- 3. Click New → User.
- 4. Enter First Name, Last Name and Email.
- 5. Select the required User Role.
- 6. For a Scanner user, select Scanner and assign the required Asset Groups.
- 7. Configure notification options if required and click Save.
- 8. Repeat for Reader, Remediation User and Unit Manager as required.
- 9. Return to the Users page and verify each account, role and status.

Roles to Remember

- Manager – Full subscription administration
- Unit Manager – Manages assigned Business Unit
- Scanner – Scanning activities
- Reader – Viewing/reporting
- Remediation User – Works with assigned vulnerabilities

Result:

Thus users were created and the roles were assigned successfully.
