

Experiment 3 – Qualys Cloud Agent Deployment in Windows

Aim

To deploy the Qualys Cloud Agent on a Windows system and verify registration with the Qualys Cloud Platform.

Procedure

- 1. Log in to Qualys and open VMDR / Cloud Agent.
- 2. Go to Cloud Agent → Activation Keys and create/select an activation key.
- 3. Select Install Agent, choose Windows, copy the Qualys-generated installation instructions and download the Windows .exe.
- 4. Open Command Prompt as Administrator and navigate to the installer folder.
- 5. Execute the exact Qualys-generated installation command.
- 6. Verify the successful installation message.
- 7. Go to Cloud Agent → Agents, refresh and locate the Windows machine.
- 8. Verify hostname, IP address, OS and agent information.

Result:

Thus Successfully deployed the agent in the qualays environment.
